Hints&Tips

Here are a few simple steps that you can take to lower your home insurance quote:

Increase the standard policy excess

If you are willing to cover more of the cost of any claim this will reduce your premium.

No claims

See which home insurance companies offer a 'No Claims' discount. This could save you up to 20% on your premiums.

Security measures

Taking steps to improve home security could mean lower premiums. Install an alarm system and make sure it covers the entire house.

Reduce fire risk

Fit and maintain smoke alarms for the safety of you, your family and your home.

Value your Contents Insurance accurately

Value your belongings carefully, think about what you would need to replace if your house was destroyed not just the items you would likely need to replace following a burglary.

Value your Buildings Insurance carefully

A common mistake is to cover the house's full market value. In fact, you should be covering it for the amount it would cost to rebuild the house if it were completely destroyed.

Protect your garden

Ensure you have adequate cover in your buildings insurance policy to protect your precious plants, as many standard policies have strict limits on amounts that will be paid out - and many do not cover plants at all.

Home Insurance Checklist

Before getting a quote, make sure you have the following information:

The size of your property:
(e.g. the number of bedrooms/total number of rooms)

The period your house was built:

The construction details:
(e.g. materials used for the walls and roof)

The security features of your house:

Your mortgage provider:

Details of your previous claims record: (e.g. The length of time since you last made a claim)

Whether you have any non-standard cover requirements:
